

# Standard Packaging Units for thermoplastic seals

**EFFICIENCY RIGHT FROM THE START**

## Changes for you

Trelleborg Sealing Solutions simplifies packaging units for standard solutions to make the flow of goods from production to the end user easier, safer and more efficient.

Depending on the outside diameter of a standard seal, we define lot sizes for small and large requirements, namely Small Standard Packaging Units (SSPU) and Large Standard Packaging Units (LSPU). The packaging method itself stays the same, in order to continuously guarantee the protective function. The only thing that changes is the number of seals in each lot.

When it comes to polyurethane and polytetrafluoroethylene standard seals this concept is already in place. All other materials will be integrated step-by-step into the new standardized packaging concept. Of course, customized products will continue to be packaged as requested.

## Advantages of Standard Packaging Units

The newly structured packaging concept from Trelleborg Sealing Solutions guarantees more transparency and efficiency in your ordering process, logistics and stock management.

- Better delivery quality and efficiency due to the reduction of manual interfaces
- Clearly defined process chain labeling of the packaging allowing increased accountability and retraceability of each batch
- Efficient electronic ordering processes and lean control for the end user
- Process safe first in – first out principle: exact delivery quantities by defined packaging units guarantee an exact pick of goods, providing transparency for customer's stock
- Exact inventories due to few counting mistakes
- Repeatability of single ordering processes gives long-term stability
- No under or over delivery provides reliable lot sizes in merchandise management systems

# PACKAGING UNITS FOR QUALITY AND SAFETY

## Overview of current standard packaging for Turcon® and polyurethane products

Outside Diameter of seal in mm	Turcon® and Slydring® lot size / packaging	Slydring® lot size / packaging	Turcon® lot size / packaging
0.1 < 25.0	25	500	500
25.1 – 50.0	10	250	250
50.1 – 75.0	5	100	50
75.1 – 150.0	5	100	25
> 150.0	no standard packaging	no standard packaging	no standard packaging

### Safety

We have defined an exact filling capacity based on customer demand. As a result you can benefit from the following advantages:

- Continuous packaging from production to the site of operation
- Prevention of broken packaging units and possible loss
- Clearly defined packaging unit according to outside diameter
- Improved product protection by appropriate packaging and stock-keeping in UV-proof poly bags
- Simplification and optimization of order processing

For further information on the entire HiMod® FlatSeal™ range please contact your local Trelleborg Sealing Solutions marketing company.

### Trelleborg Blue Dimension™

We strive to make our customers successful by supplying smart and increasingly sustainable sealing solutions for challenging applications. But we claim more than just offering products with technically excellent functionalities. With our products, we want to contribute to a better business and a better society that protects people, the environment and infrastructure.

The new packaging concept significantly contributes to preserving the environment. For example our products are packed in recyclable cardboard boxes that bear the recycling logo. Our holistic ambition reflects the starting point and heart of our group-wide campaign - the “Blue Dimension™”.

Please find more information on “Blue Dimension™” [www.trelleborg.com/bluedimension](http://www.trelleborg.com/bluedimension)

Please support us in our actions and only order in unbroken lots, i.e. complete Small Standard Packaging Units (SSPU) and Large Standard Packaging Units (LSPU).
